Manufacturer of Electronic Circuits for Welding Machinery and Associated Apparatus.

The Mini thumb control unit simply plugs into the hand control housing.

When the mini control is plugged in, it bypasses the setting on the main hand control unit. All control is automatically transferred to the mini control no matter where the main hand control is set.

The main hand control becomes inoperative while the mini hand control is in use.

When unplugged, control automatically reverts back to the hand control.

Use of the Pipeliner-I Mini Hand Control Unit
